# Portfolio: Andrew Gent

Because the majority of my work has been focused on internal systems, there are no readily accessible samples.

The following portfolio provides a brief description and screenshots from selected systems that I designed and implemented over the past few years.

– *Andrew Gent*

- Rating & Tagging (2007)
- Searchable (2007)
- me@hp (2006)
- Project Profile Repository (2004)

# Portfolio: Rating & Tagging (2007)

The screenshot shows the HP Knowledge Network intranet. At the top, there is a search bar with the text "Search: Search this site Intranet". Below the search bar, there is a banner for "Knowledge Management, web2.0, HP Kb Network" with a 5-star rating and "38 ratings". A "Tag This Page!" button is visible. The main content area includes sections for "Support & Training", "KM & KCR Policies", and "Region KM".

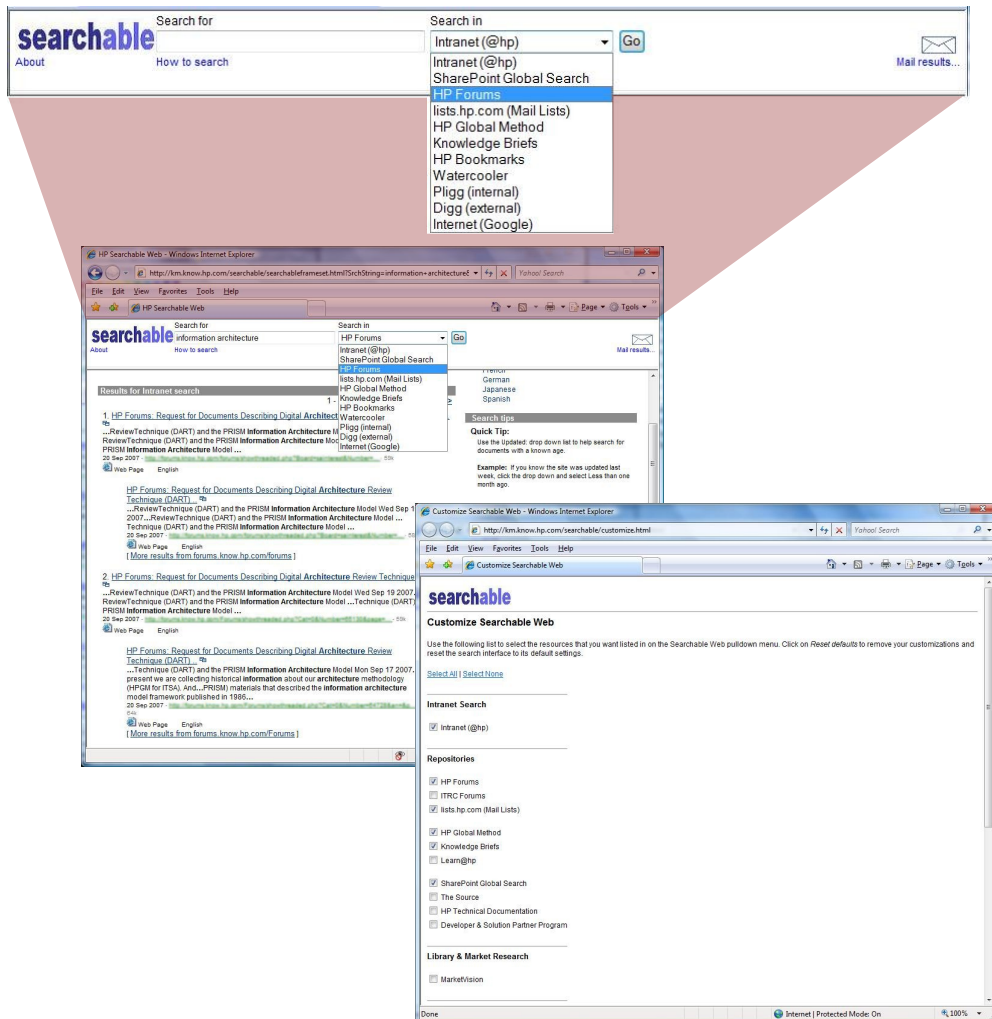

The *Social Web* allows user to rate and tag web pages. Although similar to popular web 2.0 applications (such as del.icio.us and Digg) it differs in that the interface is seamlessly integrated in the standard corporate intranet banner.

Users see the tags and ratings directly on the page. They can add tags or ratings directly from the page, or can click on a tag to browse related web sites.

(The Social Web was run as an experiment through 2007-2008)

The screenshot shows a "Social Network: Bookmarks Browser" window. The address bar shows the URL: <http://scribble.america.hpqcorp.net/socnet/Bookmark.asp?tag=Social%20net-working>. The main content area displays a list of "Bookmarks Matching Tag Social Networking". The list includes various links such as "Page: Stephen E. Johnson", "Page: Call For Names", "Page: Scribble Development Center", "Page: K Address Resource Site - Home", "Page: Home - HP Coaching Network", "Page: Home - Provides K Address Assistance Site", "Page: K Requests - Where is the Privacy Handbook?", "Page: WebHome - MSIG - HP Labs Title", "Page: All Services", "Page: Social Wiki", "Page: About mtdhp", "Page: Status Page", "Page: Ask the Expert", "Page: Express Profiles", "Page: Community Directory", "Page: Social Learning Resources", "Page: Tech Unleashed", "Page: Paul Latham", "Page: Info Resources", "Page: Andrew Sublette", "Page: Carl Smith", "Page: Jack Jette", "Page: Dennis Smith", "Page: James Smith", "Page: Al Stewart", "Page: Steve Conroy", "Page: Search Profile", "Page: Amy Woodman", "Page: Paul Landrum", "Page: Mike Li", "Page: Richard Anderson", "Page: Aronja Aronja", "Page: Samant Shah", "Page: Scott Chaffin", "Page: Pat Jansky", "Page: David Linnick", "Page: Knowledge Network", "Page: Philippe Bourque-Gibet", "Page: Eric J. Leonard".

# Portfolio: Searchable (2007)

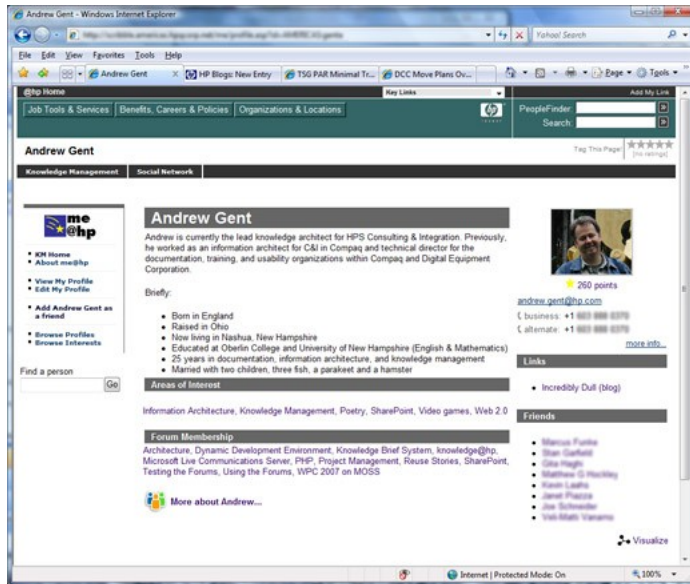

Like many corporate intranets, HP's intranet includes a vast array of content, not all of which is indexed by intranet search. Employees have difficulty remembering where all of the different content is stored.

Since there is no federated search, Searchable aims to be a second best option. The design goal was to simplify search without requiring any server resources. So Searchable is a client-based AJAX application that let's users choose where to search from within a single interface.

There is a customization feature (saved as a browser cookie) for selecting what search sources are listed.

# Portfolio: me@hp (2006)

A social networking application that enhances the standard corporate employee information (name, address, telephone) by allowing users to add personal information, such as a biography, areas of interests, links, and friends.

The “areas of interest” is a folksonomy that can be browsed or searched.
